Dear Valued Customer,

AQ-Matic has announced an upcoming transition to a new stager control platform, AQ Core, which will replace the existing NXT and 962 stager controls beginning January 1, 2027.

Here's what you need to know about the transition:

Important Dates:

NXT Stager Controls: Orders are no longer being accepted as of November 12, 2026, due to unforeseen supply issues.

962 Stager Controls: Orders will continue to be accepted through March 2027.

AQ Core Controls: The new platform will be available on all AQ-Matic stager configurations beginning January 1, 2027.

Introducing AQ Core

The new AQ Core platform combines the NXT and 962 controls into one updated system, offering several improvements, including:

Dynamic call-up based on remaining unit capacity and actual flow.

Updated 32-bit processor designed to support future functionality.

Stepper motor drive with added flexibility.

New 51-SB stager program, eliminating the separately mounted solenoid valve.

What Does This Mean for Existing Systems?

AQ-Matic will continue honoring the three-year warranty on existing NXT and 962 controls. Replacement parts will remain available, and AQ Core is designed to retrofit existing AQ-Matic stager systems.

The new AQ Core also maintains the same enclosure, footprint, mounting, stager operation, and connections to valves and meters. Programming and setup will be updated.

How Can We Help?

As your AQ-Matic distributor, BUY AQ-MATIC is here to help you navigate this transition. If you currently use NXT or 962 stager controls, now is a good time to review your inventory and upcoming needs.

Contact us for assistance with product questions, ordering, or planning for the transition to AQ Core.

Thank you for your continued business!
